

Caplin Trader 1.3

RELEASE HIGHLIGHTS

BENEFITS

- Model and integrate your own permissions with users, groups, actions and rules to provide view, trade, tier, spread and access control.
- Extend Caplin Trader Client with the licensed Caplin and Ext JS JavaScript API libraries.
- Customize the look and feel of grids and trade tiles.
- Full end-to-end client and server trade logging for enhanced auditing and security.
- Provide a new and powerful way for users to find the instruments they want using the new explorer-style, real-time tree view.
- Monitor licensing activities and receive warnings when end user limits are approached.

CAPLIN TRADER

Permissioning

A flexible API and permissioning architecture allows Caplin Trader to be modelled on, and fully integrated with, your company's permissioning system.

Built on Caplin Platform Release 4.5

Release 4.5 of the Caplin Platform incorporates a new, simplified and easy-to-administrate licensing system.

CAPLIN TRADER CLIENT

Improved Developer's Kit

The comprehensive Caplin Trader Client API is provided as a set of documented JavaScript libraries. The kit now includes the popular Ext JS library, licensed for your use, to aid the development of custom content.

Product Grid

The new improved grid is fully configurable through XML and has a new, easy-to-use graphical user interface that allows columns to be added, removed and re-ordered.

Improved Trade Tiles

Trade tiles have a new look and feel and can now be fully configured in XML.

Client Side Console Logging

Automatically log user trades and email logs to technical support.

New Tree View Component

Static or Liberator provided real-time information can be displayed in an explorer-style tree view component that has drag-and-drop integration with other display components.
